FLUIDS SYSTEMS

Our industry-leading digital tools keep us one step ahead of your challenges.

Effective data analysis is one of the most powerful and valuable tools at your disposal. It's never been more important. Newpark fluids specialists utilize innovative digital fluid solutions and software that bring together our vast fluids knowledge and historic well data with proprietary formation and rock properties to anticipate and overcome your challenges. Worldwide. Making informed, data-driven decisions to deliver consistent performance, leading best practices and a superior service – with no surprises.

We know the key to success is understanding exactly how the fluid system will behave in any circumstances you may encounter within your operations. That's why we'll leverage the latest cloud computing and analytical technologies to model and interrogate these potential scenarios – enabling us to develop the right solution for your well and any contingencies you need to cover.

Mining drilling fluids solutions

Putting the smartest tools in the best hands

It's not enough just to have the smartest tools for the job. You need the specialist expertise to know how to interrogate the data and make the right move at the right time. Our team of dedicated experts do just that – utilizing our leading-edge systems to add value by delivering best-practices, consistency of service and share our knowledge on a global scale.

As the digitalization journey continues across the oilfield, we'll keep investing in our digital solution capabilities to add value for our customers.
